

Comes with tubing and check valve in a kit. A truly cost effective solution giving more people access to using ozone in their venturi based water projects.

Spa Pure

Small, compact, no moving parts, easy installation. No fan to fail and pull dust and dirt into the unit affecting performance.

Needs venturi to be installed after pump and filter in the water return path and we stock various types depending on your requirements that are sold separately.
PVC 50mm and plastic 3/4" examples below

Need more O3, connect 2 or more in parallel using a T-Piece. Each unit is good for treatments of up to 4000 liters of water.

Don't be fooled by other suppliers selling similar looking units, ours is custom built to our specification that is optimum for our climate and electricity supply. Designed to run on ambient air and work for 8000 hours or more.

Suppliers always give mg/h specs for O3 generators output, but these specifications are for flows of pure oxygen and are meaningless when you run off ambient air. We spec ours for treating up to 4000 liters of water running off ambient air.

12000 liters configuration with 3 in parallel, also adding redundancy to your project if a unit fails.
